WORK EXPERIENCE

The Rust Programming Language

Clippy Team member October 2022 - Present

- Over 450 contributions (new features, optimizations, and reviewed pull requests) listed on thanks.rust-lang.org
- Focused on delivering new features to the compiler, both user-facing and DX-improving. Always with the perspective of improving performance at zero cost.
- Achieved a 38-61% performance boost in real-world projects. Cutting by half analysis time over a 2-year period, and reducing developer downtime by half.
- Integrated Clippy into the `rustc-perf` internal project for monitoring and profiling performance over time.
- Designed and proposed the "Optimizing Clippy & Linting" project goal.

Project Goal Lead June 2024 - June 2025

- I led the "Optimizing Clippy & linting" project goal at Rust. Including authoring new optimizations and reviewing contributor's pull requests.
- Successfully coordinated an inter-team effort, achieving integrations with other existing projects.
- Documented and formalized RFC documents regarding the goal. Writing technical details in comprehensive ways.

Embark Studios

Independent work (Clippy perf.) Sep 2023 - Mar 2024

- Sponsored me to work on Clippy and Rust's linting infrastructure, with the objective of making it faster on CI/CD contexts. After direct collaboration with their team, we managed to get their CI/CD time in between reasonable margins.

Private Clientele

Contractor work / Software Developer November 2025 - Present

- Private funded Clippy development work.

Features, projects and talks

RFC PR #3881 @ Rust November 2025
